The View from Above

Most maps show a view from above. This is called a bird's-eye view. It seems as though people are seeing the land the way a bird would.

In the past, a bird's-eye view was hard to draw. There were no airplanes. People did not know what land looked like from above. Then, about two hundred years ago, people started buying cameras. They tied wires to them, and strapped the cameras to kites. They put cameras on balloons and birds too. People could use the wires to take pictures of the view from above.

Today, drones can be used for bird's-eye views.

This 1897 map shows a bird's-eye view.

Mathematics

Picking Points

Map scales show distances on maps. First, map users measure the distance between two points. Then, they use a map scale to find the actual distance between those points.

Science

Finding Direction

The needle on a compass is a magnet. Earth is also a magnet. The north and south poles are the most magnetic parts of Earth. The needle on a compass spins until it points north or south, depending on the type of compass and whether a person is north or south of the equator.

A compass rose on a map shows direction.

Arts

Go for Green

Most GPS maps use colors to show traffic conditions. Green means traffic is normal. Yellow means it is moving more slowly than normal. Red (or black) means traffic is moving very slowly. These colors help people avoid heavy traffic.

It used to be hard to take photos from the sky. But today, it is easy. In fact, photos are being taken from higher up than ever before. People who make maps can even use photos taken from space.

Astronauts who live and work in space take some of the photos. Satellites take some of them too. They all show what Earth looks like from far away.

Astronaut Don Pettit uses his drill and camera to take photos.

Technology & Engineering

Space Shots

Taking photos from space used to be a problem. They ended up blurry. One astronaut on the International Space Station (ISS) had an idea. He put a camera on a drill. The drill spun the camera the opposite way of the ISS. The spin kept the camera steady. It gave him clear photos.

This photo of the Strait of Gibraltar was taken from a satellite in space.

STEAM CHALLENGE

Define the Problem

A new student just joined your class. Your teacher has asked you to create a school map for the student.

Constraints: Your map must be drawn from a bird's-eye view. You must include color in your map.

Criteria: Your map must have a map legend, a compass rose, and drawings of important places at your school. It should be clear and easy to use.

- Research and Brainstorm**
How do maps help people get around? What will different colors mean on your map? What are the important places at your school? Where are they located?
- Design and Build**
Decide what you will include in your map legend. Then, sketch your school as though you were looking from above. Draw and color your map.
- Test and Improve**
Share your map with your friends. Ask them to find a place on your map. Did they find it easily? Is your map clear? How can you improve your map? Improve your map and present it again.
- Reflect and Share**
Could a new student read and understand your map? How can you make your map easier to follow?
